

Pythia-14M: trained frontiers and post-hoc clipping controls

A7 adds symmetric post-RoPE Q/K/V gates to A4; displayed validation loss is capped at 6

Post-hoc points above loss 6 are omitted by the inherited display cap (GeLU $p \geq 0.5$; ReLU $p \geq 0.6$).
Lines connect dose/target order only. R_{model} is exact-zero logical-product opportunity, not measured speedup; one seed.
