

# Pythia-14M and 70M: trained frontiers and post-hoc clipping controls

A0/A1-H curves use post-hoc TEAL clipping; A4-OL1 and A7-OL1 are trained ladders

- Post-hoc clipping on A0
- Post-hoc clipping on A1-H
- A4-OL1 trained ladder
- A7-OL1 trained ladder
- 14M (filled)
- 70M (open)

Points above loss 6 are omitted from view; all values remain in the accompanying table.  
Lines connect dose/target order only.  $R_{\text{model}}$  is exact-zero logical-product opportunity, not measured speedup; one seed per scale.
