

Pythia-14M A4 gates: realized OL1 pressure target

Historical h-only capture versus corrected four-site capture; $\lambda=1$ and matched gate threshold

—●— A4 gates + OL1@h (Run 012) -■- A4 gates + four-site OL1 (Run 015) Matched kappa pair

All points use one seed and all 338 complete validation blocks (692,224 tokens). Colored lines connect kappa order only.
 R_{model} is exact-zero logical-product opportunity, not measured speedup.
