

Pythia-14M and 70M: trained frontiers and post-hoc clipping controls

A0/A1-H curves use post-hoc TEAL clipping; A4-OL1 and A7-OL1 are trained ladders

Points above loss 6 are retained and clipped by the axis limit; trajectories exiting the panel continue off-scale.
Lines connect dose/target order only. R_{model} is exact-zero logical-product opportunity, not measured speedup; one seed per scale.
