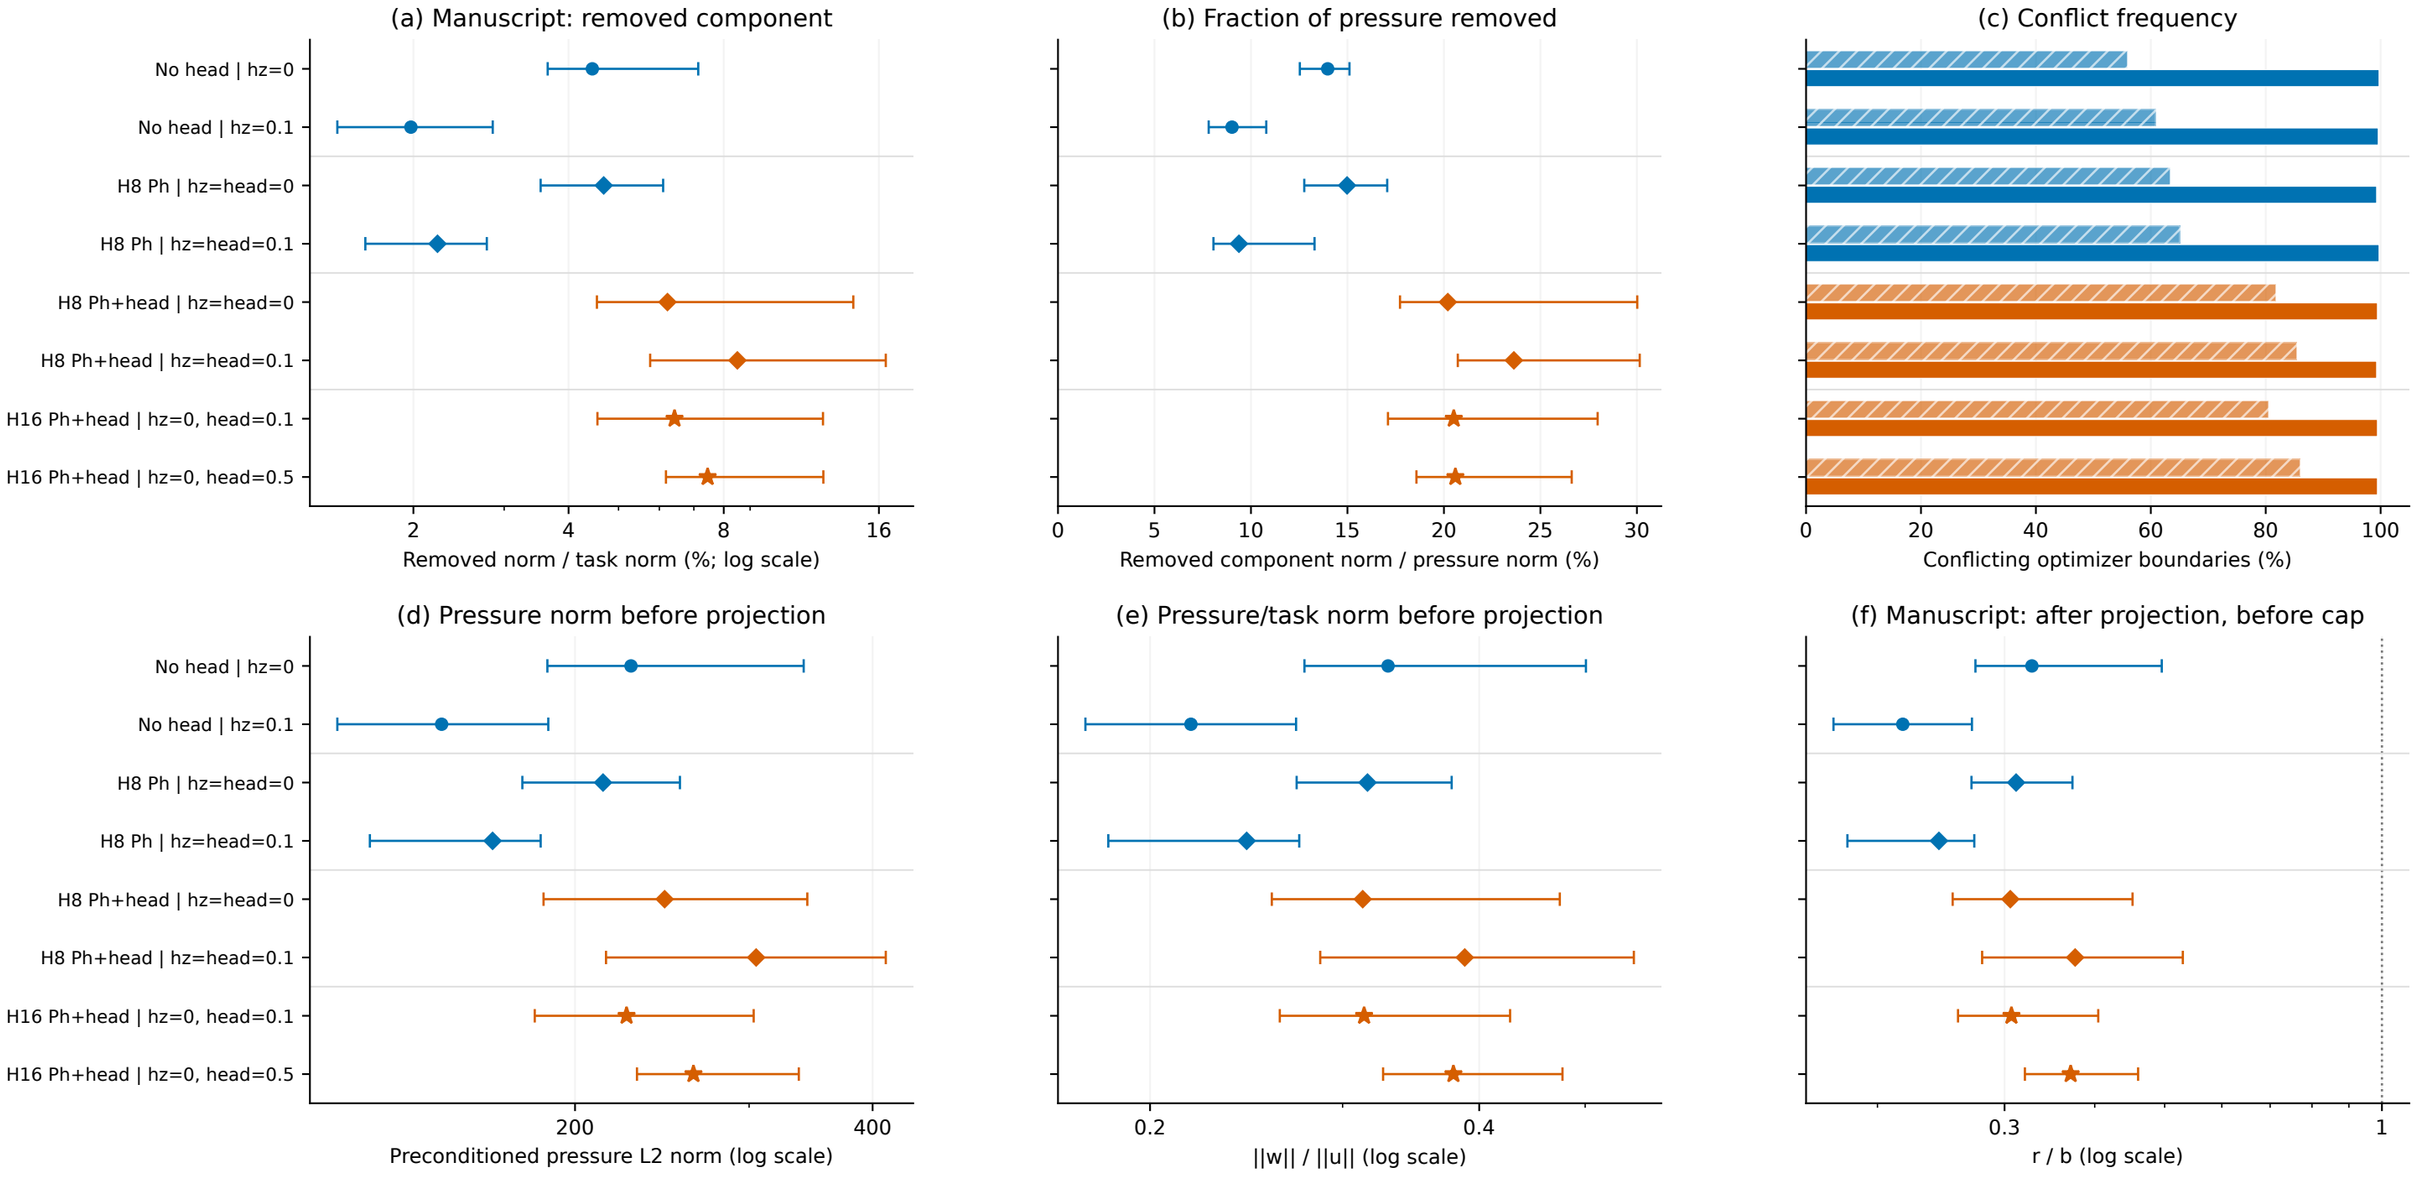
Orthogonalization resistance: h-only versus h + vocabulary-head pressure

Global eligible-parameter geometry · 712 boundaries/condition · medians and interquartile ranges
Ph: 6 tensors weighted 1/6; Ph+head: 7 tensors weighted 1/7. The head contribution is not isolated.



Adaptive projection is frequent in every condition; the norm cap is active in only 1–3 of 712 boundaries here.
Percent removed refers to a norm, not a count of gradient coordinates or pressure energy.
