T7/Ph corner tiles against the orange quality-latency frontier
(a) Previous manuscript cohort + four tile endpoints
(b) 14M detail and matched T7 scalar references
Full-model latency (ms; lower is better)
Validation loss (canonical FP16; lower is better)
T7 tile k=0
T2 tile k=0
T7 tile k=0.1
T2 tile k=0.1
Previous scalar T2/Ph
Previous scalar T7/Ph (orange)
T2/Ph tiles (Run061)
T7/Ph tiles (Run062)
Matched T7 scalar (reference)
Observed Pareto frontier
40 frontier points: 36 previous + 2 T2 tiles + 2 T7 tiles. Hollow references excluded.
Process-range whiskers; one seed. Historical sessions/kernel variants differ; no coordinate normalization.
BF16 B1/T2048, uncached, full logits. Circles/triangles/squares: 14M/31M/70M; gray: Base (native filled, kernel hollow).
